AI INTELLIGENCE

SIGNAL

The signal suggests a cautious stance, leaning towards a neutral position with no strong conviction. Given the lack of a clear directional bias and no premium indicated, we should avoid taking significant speculative positions at this time. The M+1 base signal is NO_DATA [signal_table.csv → 2026-03-15, signal_label_month_base = NO_DATA] with a premium of N/A EUR/MWh over the curve proxy [signal_table.csv → 2026-03-15, signal_month_base = None]. Model confidence is N/A [signal_table.csv → 2026-03-15, month_confidence = None], giving a position size of 0.0 [signal_table.csv → 2026-03-15, month_position_size = 0.0].

FUNDAMENTALS

Fundamental drivers point to elevated residual load compared to recent averages, which typically exerts upward pressure on prices. Conversely, wind generation is significantly below its recent average, removing a key price-dampening factor. The gas price is trading slightly lower than its recent average, offering some comfort. Residual load is 33597.0 MW [delivery_periods.csv → 2026-03-15, avg_residual_load_mw = 33597.0] vs 7-day average of 29650.0 MW [delivery_periods.csv → trailing_7d, mean_residual_load_7d = 29650.0]. Wind generation is 9738.0 MW [delivery_periods.csv → 2026-03-15, avg_wind_mw = 9738.0] vs 7-day average of 16527.0 MW [delivery_periods.csv → trailing_7d, mean_wind_mw_7d = 16527.0]. Gas price is 50.12 EUR/MWh [delivery_periods.csv → 2026-03-15, gas_price = 50.12] vs 7-day average of 51.66 EUR/MWh [delivery_periods.csv → trailing_7d, mean_gas_price_7d = 51.66]. The market is in thermal regime [signal_table.csv → 2026-03-15, is_thermal_regime = True].

INTRADAY SHAPE

The intraday shape anticipates a pronounced price peak in the late afternoon, driven by typical demand ramps. Prices are expected to decline sharply into the late evening. The spread between peak and off-peak hours is notable. Peak-base premium is 2.2 EUR/MWh [signal_table.csv → 2026-03-15, peak_base_premium_pred = 2.2]. Prices are lowest at hour 23 [delivery_periods.csv → 2026-03-15, min_hour_pred = 23] and highest at hour 17 [delivery_periods.csv → 2026-03-15, max_hour_pred = 17]. Intraday spread is 114.28 EUR/MWh [delivery_periods.csv → 2026-03-15, intraday_spread_pred = 114.28]. INVALIDATION STATUS The signal is currently clean, with no invalidating factors observed. This indicates that the model's forecast is based on reliable inputs and the underlying market conditions are not exhibiting extreme anomalies. We can proceed with trading decisions based on the current forecast. No invalidation flags are active [signal_table.csv → 2026-03-15, any_invalidation = False]. Signal is clean with position size 0.0 [signal_table.csv → 2026-03-15, month_position_size = 0.0]. CITATION VALIDATION 21/21 claims verified against pipeline data. Status: CLEAN Full audit: outputs/ai_intelligence/2026-03-15/citation_validation.json
